सं./No.196-S/2-3/WS/Quality of Water

दिनांक/Date: 21/01/2014

Divisional Railway Manager
Northern Railway, DRM Office
DLI, UMB, FZR, LKO and MB.

विषय/Sub: **SSE(W)/Water Supply for stations with large water supply systems.**

संदर्भ/Ref: **Pr.CE's DO letter of even no. dated 27.09.2013 to DRMs regarding quality of drinking water supply on the divisions.**

To bring about the much needed improvement in water supply, there is an urgent need to improve day to day supervision over the various water supply works, operations and activities from source to tap. At several stations, the work load of water supply is quite large (Annexure-I).

2. It is therefore advised to post an independent SSE (W) to look after water supply at the following places:

LDH, UMB, GZB, MB, LKO and DLI (under each ADEN covering station and colony areas).

They shall be responsible for maintenance and operation of the water supply system from the source to the distribution network upto the user premises. Water supply within the user premises, i.e. at the station buildings, platforms, washing line etc. in the other service buildings, and in the houses in the colonies shall remain with the SSE/Works of the section. The SSE (Works)/Water Supply shall thus be responsible for the bore-wells

Contd.....2

and other sources of water, if any, treatment plants, storage tanks, and the main external distribution pipelines.

3. For maintenance of water supply from the various renney-wells in the Delhi area also one SSE (W)/Water Supply is required. The SSE (WS) in-charge of the supply from the renney-wells shall be responsible for the water supply system from and including the renney-wells to the main storage tanks at DLI/NDLS/NZM/ANVT, including the gas chlorination plants. He shall also be entrusted with new works related to water supply from renney-wells. This SSE should be placed under one of the existing ADENs of the Delhi area.

4. At the remaining seven places mentioned in the list in Annexure-I i.e. DLI, NDLS, NZM, ASR, JAT, SRE and BSB, one JE(W/S) under the existing in-charge SSE(W) shall look after the complete water supply system from source to the tap. The JE (W) shall be designated JE (W)/Water Supply (JE (W)/WS in short).

5. As the workload remains unchanged, the above posts should be created from the existing cadre by redistributing of work and reallocation of the supporting staff among the SSE (W) and JE (W)s.

6. For balancing the workload, if required, among the SSEs at a place, Divisions may consider giving related works like drainage/sanitation, horticulture, roads, etc. to the SSE/WS.

You are requested to carry out the necessary exercise for redistribution of work to put in place SSE (W)/Water Supply and JE(W)/WS, and submit your proposal within a month's time.
