Sub: System Improvement.

A vigilance check was conducted by Northern Railway (Vigilance) on the work of installation of passenger escalators at stations over Northern Railway. These contracts require both electrical and civil work. In the SCHEDULE OF RATES AND QUANTITIES of these contracts, civil work is taken as NS item as one unit. It was found that common pit was used for pair of escalators. In the drawings of these escalators, it was seen that there is less civil work required in case of pair of escalators as compared to total civil work required for two single escalators as two inner long RCC walls of pits are not required. As payment is not as per the item rates of civil work, therefore full payment for civil work was made to the contractor as per contract in case of common pit for pair of escalators.

In order to address this issue following system improvement is suggested for civil work of Escalators.

"Item rates for the civil work shall be introduced in future tenders for provision of escalators so that payment for civil work is made as per actual quantity executed as per site conditions."

The action taken in this regard may kindly be communicated to this office.
